Featuring sixty nine fraud cases, this work reveals the many faces of fraud, how frauds are detected, and how perpetrators are brought to justice.

Brucellosis is a nationally and internationally regulated disease of livestock with significant consequences for animal health, public health, and international trade. In cattle, the primary cause of brucellosis is *Brucella abortus*, a zoonotic bacterial pathogen that also affects wildlife, including bison and elk. As a result of the Brucellosis Eradication Program that began in 1934, most of the country is now free of bovine brucellosis. The Greater Yellowstone Area (GYA), where brucellosis is endemic in bison and elk, is the last known *B. abortus* reservoir in the United States. The GYA is home to more than 5,500 bison that are the genetic descendants of the original free-ranging bison herds that survived in the early 1900s, and home to more than 125,000 elk whose habitats are managed through interagency efforts, including the National Elk Refuge and 22 supplemental winter feedgrounds maintained in Wyoming. In 1998 the National Research Council (NRC) issued a report, *Brucellosis in the Greater Yellowstone Area*, that reviewed the scientific knowledge regarding *B. abortus* transmission among wildlife—particularly bison and elk—and cattle in the GYA. Since the release of the 1998 report, brucellosis has re-emerged in domestic cattle and bison herds in that area. Given the scientific and technological advances in two decades since that first report, *Revisiting Brucellosis in the Greater Yellowstone Area* explores the factors associated with the increased transmission of brucellosis from wildlife to livestock, the recent apparent expansion of brucellosis in non-feedground elk, and the desire to have science inform the course of any future actions in addressing brucellosis in the GYA.

This edition of Parker's California Business & Professions Code is from our Parker's California Code Business Series and is a convenient desktop reference containing the California code and regulations you use most in your business practice. This single volume contains the complete primary law plus annotations and other features to help you find what you need quickly and expand your research.

What drug provides Americans with the greatest pleasure and the greatest pain? The answer, hands down, is alcohol. The pain comes not only from drunk driving and lost lives but also addiction, family strife, crime, violence, poor health, and squandered human potential. Young and old, drinkers and abstainers alike, all are affected. Every American is paying for alcohol abuse. Paying the Tab, the first comprehensive analysis of this complex policy issue, calls for broadening our approach to curbing destructive drinking. Over the last few decades, efforts to reduce the societal costs—curbing youth drinking and cracking down on drunk driving—have been somewhat effective, but woefully incomplete. In fact, American policymakers have ignored the influence of the supply side of the equation. Beer and liquor are far cheaper and more readily available today than in the 1950s and 1960s. Philip Cook's well-researched and engaging account chronicles the history of our attempts to "legislate morality," the overlooked lessons from Prohibition, and the rise of Alcoholics Anonymous. He provides a thorough account of the scientific evidence that has accumulated over the last twenty-five years of economic and public-health research, which demonstrates that higher alcohol excise taxes and other supply restrictions are effective and underutilized policy tools that can cut abuse while preserving the pleasures of moderate consumption. Paying the Tab makes a powerful case for a policy course correction. Alcohol is too cheap, and it's costing all of us.

Some vols. include supplemental journals of "such proceedings of the sessions, as, during the time they were depending, were ordered to be kept secret, and respecting which the injunction of secrecy was afterwards taken off by the order of the House".

Environmental and Health Issues in Unconventional Oil and Gas Development offers a series of authoritative perspectives from varied viewpoints on key issues relevant in the use of directional drilling and hydraulic fracturing, providing a timely presentation of requisite information on the implications of these technologies for those connected to unconventional oil and shale gas development. Utilizing expertise from a range of contributors in academia, non-governmental organizations, and the oil and gas industry, Environmental and Health Issues in Unconventional Oil and Gas Development is an essential resource for academics and professionals in the oil and gas, environmental, and health and safety industries as well as for policy makers. Offers a multi-disciplinary appreciation of the environmental and health issues related to unconventional oil and shale gas development Serves as a

collective resource for academics and professionals in the oil and gas, environmental, health, and safety industries, as well as environmental scientists and policymakers Features a diverse and expert group of chapter authors from academia, non-governmental organizations, governmental agencies, and the oil and gas industry

The Action Plan for Australian Birds 2020 is the most comprehensive review of the status of Australia's avifauna ever attempted. The latest in a series of action plans for Australian birds that have been produced every decade since 1992, it is also the largest. The accounts in this plan have been authored by more than 300 of the most knowledgeable bird experts in the country, and feature far more detail than any of the earlier plans. This volume also includes accounts of over 60 taxa that are no longer considered threatened, mainly thanks to sustained conservation action over many decades. This extensive book covers key themes that have emerged in the last decade, including the increasing impact of climate change as a threatening process, most obviously in Queensland's tropical rainforests where many birds are being pushed up the mountains. However, the effects are also indirect, as happened in the catastrophic fires of 2019/20. Many of the newly listed birds are subspecies confined to Kangaroo Island, where fire destroyed over half the population. But there are good news stories too, especially on islands where there have been spectacular successes with predator control. Such uplifting results demonstrate that when action plans are followed by action on the ground, threatened species can indeed be recovered and threats alleviated.

Australia has managed to decouple economic growth from the main environmental pressures and has made impressive progress in expanding protected areas. However, it is one of the most resource- and carbon-intensive OECD countries, and the state of its biodiversity is poor and worsening. Advancing ...

Advances in trauma care have accelerated over the past decade, spurred by the significant burden of injury from the wars in Afghanistan and Iraq. Between 2005 and 2013, the case fatality rate for United States service members injured in Afghanistan decreased by nearly 50 percent, despite an increase in the severity of injury among U.S. troops during the same period of time. But as the war in Afghanistan ends, knowledge and advances in trauma care developed by the Department of Defense (DoD) over the past decade from experiences in Afghanistan and Iraq may be lost. This would have implications for the quality of trauma care both within the DoD and in the civilian setting, where adoption of military advances in trauma care has become increasingly common and necessary to improve the response to multiple civilian casualty events. Intentional steps to codify and harvest the lessons learned within the military's trauma system are needed to ensure a ready military medical force for future combat and to prevent death from survivable injuries in both military and civilian systems. This will require partnership across military and civilian sectors and a sustained commitment from trauma system leaders at all levels to assure that the necessary knowledge and tools are not lost. A National Trauma Care System defines the components of a learning health system necessary to enable continued improvement in trauma care in both the civilian and the military sectors. This report provides recommendations to ensure that lessons learned over the past decade from the military's experiences in Afghanistan and Iraq are sustained and built upon for future combat operations and translated into the U.S. civilian system.

A comprehensive guide to all the State and Federal laws that affect Florida pharmacies on a daily basis, Florida and Federal Pharmacy Laws and Regulations is a trusted and indispensable resource for Florida pharmacy professionals. Compiled by our team of expert editors and staff attorneys at LexisNexis, this volume contains all the information you need to make sure you comply with the rule in the Florida Administrative Code requiring all Florida pharmacies to keep a current copy of the laws and rules governing the practice of pharmacy in the State of Florida. This book is updated annually to ensure that your pharmacy is in compliance with this legal requirement at all times. You'll find coverage of all relevant sections from The Florida Statutes, Florida Administrative Code, the United States Code as well as the Code of Federal Regulations. Finally, for your convenience, the book also includes the entire text of the DEA's Pharmacist's Manual. Whether you are a pharmacy technician purchasing a single copy or the manager of a chain of pharmacies purchasing in volume, Florida and Federal Pharmacy Laws and Regulations is the resource you need at a price you can afford.

Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in

the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

The Model Rules of Professional Conduct provides an up-to-date resource for information on legal ethics. Federal, state and local courts in all jurisdictions look to the Rules for guidance in solving lawyer malpractice cases, disciplinary actions, disqualification issues, sanctions questions and much more. In this volume, black-letter Rules of Professional Conduct are followed by numbered Comments that explain each Rule's purpose and provide suggestions for its practical application. The Rules will help you identify proper conduct in a variety of given situations, review those instances where discretionary action is possible, and define the nature of the relationship between you and your clients, colleagues and the courts.

State legislatures are tasked with drawing state and federal districts and administering election law, among many other responsibilities. Yet state legislatures are themselves gerrymandered. This book examines how, why, and with what consequences, drawing on an original dataset of ninety-five state legislative maps from before and after 2011 redistricting. Identifying the institutional, political, and geographic determinants of gerrymandering, the authors find that Republican gerrymandering increased dramatically after the 2011 redistricting and bias was most extreme in states with racial segregation where Republicans drew the maps. This bias has had long-term consequences. For instance, states with the most extreme Republican gerrymandering were more likely to pass laws that restricted voting rights and undermined public health, and they were less likely to respond to COVID-19. The authors examine the implications for American democracy and for the balance of power between federal and state government; they also offer empirically grounded recommendations for reform. Society's greatest use of water is in food production; a fact that puts farmers centre stage in global environmental management. Current management of food value chains, however, is not well set up to enable farmers to undertake their dual role of feeding a growing population and stewarding natural resources. The book considers the interconnected issues of real water in the environment and "virtual water" in food value chains and investigates how society influences both fields. This perspective draws out considerable challenges for food security and for environmental stewardship in the context of ongoing global change. The book discusses these issues by region and with global overviews of selected commodities. Innovation relevant to the kind of change needed for the current food system to meet future challenges is reviewed in light of the findings of the regional and thematic analysis.

Encyclopedia of the World's Biomes is a unique, five volume reference that provides a global synthesis of biomes, including the latest science. All of the book's chapters follow a common thematic order that spans biodiversity importance, principal anthropogenic stressors and trends, changing climatic conditions, and conservation strategies for maintaining biomes in an increasingly human-dominated world. This work is a one-stop shop that gives users access to up-to-date, informative articles that go deeper in content than any currently available publication. Offers students and researchers a one-stop shop for information currently only available in scattered or non-technical sources Authored and edited by top scientists in the field Concisely written to guide the reader though the topic Includes meaningful illustrations and suggests further reading for those needing more specific information

This book explores why some people become politicians, how they represent citizens in parliaments, and what they think about democracy and its institutions. It analyses the results of the first survey of a representative sample of Spanish MPs (580 cases) and citizens. The study covers areas such as: social profiles; recruitment and selection; women in parliaments; motivation for politics; perception of the representative function and how this is affected

by corruption, disaffection and mistrust; national and regional identities; ideology; the functioning of parliamentary groups, and perceptions about the EU. The case of Spain is used to demonstrate how MPs' values, opinions and attitudes conflict and complement with those of the citizens they are supposed to represent. Through a systematic comparison between MPs and citizens, the contributions deal with topics that are key to understanding how democracies work and the role played by MPs.

The purpose of these guidelines for investigating geologic hazards and preparing engineering-geology reports, is to provide recommendations for appropriate, minimum investigative techniques, standards, and report content to ensure adequate geologic site characterization and geologic-hazard investigations to protect public safety and facilitate risk reduction. Such investigations provide important information on site geologic conditions that may affect or be affected by development, as well as the type and severity of geologic hazards at a site, and recommend solutions to mitigate the effects and the cost of the hazards, both at the time of construction and over the life of the development. The accompanying suggested approach to geologic-hazard ordinances and school-site investigation guidelines are intended as an aid for land-use planning and regulation by local Utah jurisdictions and school districts, respectively. Geologic hazards that are not accounted for in project planning and design often result in additional unforeseen construction and/or future maintenance costs, and possible injury or death.

Limited, finite, contaminated, unavailable or expensive, water divides people all around the globe. We all cannot do without water for long, but can for long enough to fight for it. This commonsensical narration of water conflicts, however, follows a pattern of scarcity and necessity that is remarkably unvaried despite different social and geographical contexts. Through in-depth case studies from around the globe, this volume investigates this similarity of narration—confronting the power of a single story by taking it seriously instead of dismissing it. In so doing, it invites the reader to rethink water conflicts and how they are commonly understood and managed. This book: Posits the existence of the idea of water conflict, and asks what it is and what it produces, thus how it is used to pursue particular interests and to legitimise specific historical, technological and environmental relations; Examines the meaning and power of ideas as compared to other categories of knowledge, advancing theoretical frameworks related to environmental knowledge, discursive power, social constructivism; Presents an alternative agenda to deepen the conversation around water conflicts among scholars and activists. Of interest to scholars and activists alike, this volume is addressed to those involved with environmental conflicts, environmental knowledge and justice, disasters and climate change from the disciplinary angles of environmental anthropology and sociology, political ecology and economy, science and technology studies, human geography and environmental sciences, development and cooperation, public policy and peace studies. Essays by Gina Bloodworth, Ben Bowles, Patrick Bresnihan, Luisa Cortesi, Mattia Grandi, K. J. Joy, Midori Kawabe, Adrienne Kroepsch, Vera Lazzaretti, Leslie Mabon, Renata Moreno Quintero, Madhu Ramnath, Jayaprakash Rao Polsani, Dik Roth, Theresa Selfa, Veronica Strang, Mieke van Hemert, Jeroen Warner, Madelinde Winnubst.

In *Ground War*, Nicholas Goedert tackles the controversies, litigation, and effects surrounding partisan gerrymandering of Congress. He contends that the appropriate actors to address the fairness of a map are nonpartisan commissions within each state, not the US courts. Using multiple empirical approaches, Goedert shows that nonpartisan commissions, adopted state-by-state, rep-

resent the best alternative to legislative districting. A rigorous account that explains how our system works and provides practical solutions for improving it, *Ground War* is an essential work for all scholars of US elections.

This book offers unique insights into the use of Facebook after the 2016 US presidential election, interrogating how users in private groups draw on individual experiences in movement building and identity construction while also critically reflecting on ethnographic practices around social media. The volume draws on the author's own involvement in a specific Facebook group focused around activism and community organizing in Texas following the 2016 US presidential election. Chapters draw on the frameworks of "small stories" and "stance" to unpack the ways in which group members use parts of their individual stories to signal beliefs to others, present themselves in relation to the group, and signal virtues of moral authority on various pressing political issues. Building on these analyses, Zentz goes on to address ways in which the scales of politics are being navigated and modified at the grassroots level in our highly networked world. This book contributes to ongoing conversations about the realities of internet use within linguistic anthropology and new media studies, and how researchers might seek to account for social media use and access to this data as these technologies develop further. This book is key reading for students and scholars in linguistic anthropology, media studies, and activism and social movement studies.

This text explores the industry of low-power television (LPTV) in America. It covers what LPTV is and how it got started, who the broadcasters are and their viewers, LPTV's significance in contemporary society and culture, and the challenges it faces in the late 1990s and the millennium.

This volume shifts the analytic attention of research on race as a people-based theoretical or empirical category to organizations. Chapters investigate how race shapes organizations and an organization's ability to get the cultural, political, and material resources it needs to survive, i.e, the organizing process.

"In 1996, the University of Alabama Press published a prodigious benchmark volume, *The Paleoindian and Early Archaic Southeast*, edited by David G. Anderson and Kenneth E. Sassaman. It was the first to provide a state-by-state record of the Paleolithic and early Archaic eras (to approximately 8,000 years ago) in this region as well as models to interpret data excavated from those eras. It summarized what was known of the peoples who lived in the Southeast when ice sheets covered the northern part of the continent and mammals such as elephants, saber-toothed tigers, and ground sloths roamed the landscape. In the United States, the Southeast has some of the most robust data on these eras. The American Southeast at the End of the Ice Age is the updated, definitive synthesis of current archaeological research gleaned from an array of experts in the region. The volume is organized in three parts: state records, the regional perspective, and perspective and future directions. State-by-state chapter overviews of the eras are followed by chapters with regional coverage on lithics (point types), submerged archaeology, gatherers, megafauna, chipped-stone technology, and spatial demography. Chapters on ethical concerns regarding the use of data from avocational collections, insight from outside the Southeast, and considerations for future research round out the volume. The contributors address five questions: When did people first arrive? How did they get there? Who were they? How did they adapt to local resources and environmental change? Then what?"--

Public School Laws of North Carolina is an ideal volume for North Carolina Education professionals, state education employees, and attorneys with an education law practice. This fully annotated and

indexed edition was compiled for the North Carolina Education Community from the official General Statutes of North Carolina. It contains Chapter 115C, Elementary and Secondary Education, with a Table of Comparable Sections and numerous related statutes on a wide range of issues. No other North Carolina publication brings together such a broad range of relevant education law in a handy, easy-to-use format.

New Technologies for Power System Operation and Analysis considers the very latest developments in renewable energy integration and system operation, including electricity markets and wide-area monitoring systems and forecasting. Helping readers quickly grasp the essential information needed to address renewable energy integration challenges, this new book looks at basic power system mathematical models, advanced renewable integration and system optimizations from transmission and distribution system sides. Sections cover wind, solar, gas and petroleum, making this a useful reference for all engineers interested in power system operation. Includes codes in MATLAB® and Python Provides a complete analysis of all new and relevant power system technologies Covers the impact on existing power system operations at the advanced level, with detailed technical insights

This book is a printed edition of the Special Issue "Growing Apart: Religious Reflection on the Rise of Economic Inequality" that was published in *Religions*

North Carolina Retirement Systems Laws is an ideal volume for human resource professionals, active and retired North Carolina employees, and all attorneys who specialize in pension, benefit, or estate law.

The Penal Code of California forms the basis for the application of criminal law within the state of California. It was originally enacted in 1872 as one of the original four California Codes, and has been substantially amended and revised since then. This book contains the following parts: Part 3 - Of Imprisonment and the Death Penalty, Part 4 - Prevention of Crimes and Apprehension of Criminals, Part 5 - Peace Officers' Memorial, Part 6 - Control of Deadly Weapons

Polsby and Wildavsky's classic text argues that the institutional rules of the presidential nomination and election processes, in combination with the behavior of the mass electorate, structure the strategic choices faced by politicians in powerful and foreseeable ways.

Applying an innovative approach to capture varieties and dynamics of federal democracies, this collection examines the conditions, mechanisms and practices that make federal democracies work.

The 2016 elections took place under intense political polarization and uncertain economic conditions, to widely unexpected results. How did Trump pull off his victory? *Political Behavior of the American Electorate*, Fourteenth Edition, attempts to answer this question by interpreting data from the most recent American National Election Study to provide a thorough analysis of the 2016 elections and the current American political behavior. Authors Elizabeth Theiss-Morse and Michael Wagner continue the tradition of Flanigan and Zingale to illustrate and document trends in American political behavior with the best longitudinal data available. The authors also put these trends in context by focusing on the major concepts and characteristics that shape Americans' responses to politics. In the completely revised Fourteenth Edition, readers will explore get-out-the-vote efforts and the reasons people voted the way they did, as well as the nature and impact of partisanship, news media coverage, and other issues in 2016—all with an eye toward understanding the trends that led up to the historic decision.
